Key Words: web development, Ratujaya, Joomla

ABSTRACT:
Sales of traditional furniture that requires the consumer to visit the store to make purchases, this course will take longer and will cost more if you visit a store that will be away from home. By using e-commerce as a medium to conduct transactions, the above issue can be avoided by using a web application. Ratujaya Web created using Joomla and XAMPP. XAMPP itself is a software installer that is in it has PHP, MySQL database server and Apache web server. With this Ratujaya the consumer can simply place an order furniture product through the media or simply browse to look for existing furniture products with market value. Thus all the products and information can be seen clearly.
