key words: food purchase applications, macromedia professional flash 8, php and mysql

ABSTRACT:
Application is a software used by the user as a tool to facilitate in finishing the work, or applications can also be interpreted as something that is still done manually changed the way that the form of either a computerized database or programming or also aids the user to create or creates an new things (hurnaningsih). Purchasing is the activity or transaction carried out to get something from other people using legal tender (money) and agreement reached. In this buying and selling activities there must be people who sell and there are people who buy. When these transactions have reached an agreement, the merchandise is sold to a buyer and merchandise to the buyer pays the seller the agreed price. Food Purchasing Application is made by using an appropriate application program and can be treated with very simple but getting good results, for example, programs that the authors apply this in the Scientific Writing Courses Macromedia Flash Professional 8 which this application program has a view that is diverse, interesting and not complicate.
