ABSTRACT:
The need for the information presented in interest form of is one form of presentation of information that is popular among computer users today. Moreover, the information needed can be accessed around the world without knowing the time and region. Based on these phenomena, the author interested in creating dynamic and interactive website for online registration of media education and training information by connecting to a database that it was created in MySQL. This website creation using PHP technology, which currently use the web page more dynamic, and also it use Dreamweaver MX as an editor. This research explains step by step how to build website. An increasingly complex need of society now makes computer technology to respond to it, and not one for one or two years to provide what is wanted by a company.
