ABSTRACT :
Bid price is the first step for companies to get orders from customers. Companies should be quick in processing each request from the customer the bid price in an effort to get the order. Making a good price quote and quick should be supported by a good system and a proper application to generate Cost of actual production. Therefore we need to design a standard system and an generating bid price application that is supported by the availability of the database to generate a bid price quickly and accurately. In the system design and application development the model of MRP, MRP II, and Microsoft Office Access was used. By using the standard system and applications, it is expected that the company is able to make competitive bid prices, so that customers satisfaction can be achieved, and also able to improve getting orders.
