ABSTRACT:
The progress of a nation can not be separated from transportation. One of the transportation problems that often occur in developing countries is the bottleneck phenomenon. Bottleneck phenomenon is a problem that often occurs in traffic management, seeing from the capacity of the vehicle and operating activities. Apart from the mushrooming shopping malls, Depok City also known as Education City which is marked with many middle and high schools built which make the increasing of transportation service. The number of students who always commute from one point to another may result to the increasing of the operating vehicles. In this research, the author will investigate about the Analysis of Bottleneck Phenomenon in Jalan Margonda, where the vehicles circulation in Detos/Margo City to Gramedia has ran inorderly.
