Key Word : Distance Teaching, Virtual Classroom, Internet

ABSTRACT:

Information, as we know it is a basic thing that really binds our lives whether we realize or not. Every day we need information in order to develop science or our intellect us. The role of information in the world of education is very important. Tangible forms of information that we can see in the world of education, which established a form of delivery of information between the teaching with student participants. This is what we would call the teaching. E-learning is a new way of learning through electronic media. By using e-learning, teaching and learning activities can be done remotely, because the method used is a web-based Internet, where we know that the Internet is a media / communications connecting point between a computer with other computers around the world. Virtual Classroom is a new breakthrough in education cyber, which allow for the teaching and learning activities only through the Internet media, where teachers and students do not need face to face directly. But could have expected the same conditions like learning on the classroom where there is a teacher, and students can be found.
