ABSTRACT :

Termite problems from year to year continue to rise and many buildings have become its victims, both from simple building and the Palace. This means that termites do not attack indiscriminately. This tiny insect has destroyed the very strong power. Termites are one of the most dangerous pests for every building, especially residential buildings. Termites are a lot of insects that cause harm to humans. Form of losses caused by termites include damage to building components made of wooden buildings and their contents in the form of furniture, books, fabrics, and even securities. Generally, materials that can be damaged by termites is a material containing cellulose.
