ABSTRACT:
Transportation in Jakarta achieved only limited to migration, there has been no consideration of time and cost efficient, as well as poor service quality that is the safety and comfort. With the busway is expected to minimize time and costs, and safety factors, and comfort. The purpose of the performance of the busway is to identify how big the performance capability of using the busway corridor Kp Melayu Ancol the views of the effectiveness and efficiency of the Busway Busway very effective in cost and more efficient in time than using public transport which has a constraint that is vehicles should be changed twice due to some other routes Kp Melayu Ancol no direct destination. Busway planning undertaken to give users an alternative to the busway which is expected to occur the transfer of the use of private cars into busway users.
