Key Words: polling online, php, mysql

ABSTRACT:
Developments in the field of computer software is now causing many emerging applications that can simplify human tasks. In scientific writing, the author discusses about creating a dynamic online poll application using MySQL database software and programming language PHP. Making an online opinion poll using PHP and MySQL this can simplify data entry, and also modification of data in a database, where we only related to database servers without having to change the page (page) on the client side.
